Syllabus

Data Privacy and Data Confidentiality 2 credits/ 4 ECTS

Prof. Dr. Jörg Drechsler

Video lecture by Prof. Dr. Jörg Drechsler

March 7 – May 02, 2023

Short Course Description

This course will provide a gentle introduction to statistical disclosure control with a focus on generating synthetic data for maintaining the confidentiality of the survey respondents. The first part of the course will introduce several traditional approaches for data protection that are widely used at statistical agencies. Some limitations of these approaches will also be discussed. The second part of the course will introduce synthetic data as a possible alternative. This part of the course will discuss different approaches to generating synthetic datasets in detail. Possible modeling strategies and analytical validity evaluations will be assessed and potential measures to quantify the remaining risk of disclosure will be presented. To provide the participants with hands on experience, all steps will be illustrated using simulated and real data examples in R.

Course Objectives

By the end of the course, students will...

- know which measures are typically taken by statistical agencies to guarantee confidentiality for the survey respondents if data are disseminated to the public.
- be aware of potential limitations of these measures.
- have a practical understanding of the concept of synthetic data.
- be able to judge in which situations the approach could be useful.
- know how to generate synthetic data from their own data.
- have a number of tools available to evaluate the analytical validity of the synthetic datasets.
- know how to assess the disclosure risk of the generated data.

Prerequisites

The statistical software R will be used for illustrations and for (some of) the homework assignments. Thus, knowledge of R is required to be able to complete the assignments. Some background regarding general linear modelling is expected. Familiarity with the concept of Bayesian statistics is helpful but not required.

Class Structure and Course Concept

This is an online course using a flipped classroom design. It covers the same material and content as an on-site course but runs differently. In this course, you are responsible for watching video-recorded lectures and reading the required literature for each unit prior to participating in mandatory weekly one-hour online meetings where students have the chance to discuss the materials from a unit with the instructor. Although this is an online course where students have more freedom in when they engage with the course materials, students are expected to spend the same amount of time overall on all activities in the course – including preparatory activities (readings, studying), in-class-activities (watching prerecorded videos, attending the live online meetings), and follow-up activities (working on assignments and exams) – as in an on-site course. As a rule of thumb, you can expect to spend approximately 3h/week on in-class-activities and 9 hours per week on out-of-class activities (preparing for class, readings, assignments, projects, studying for quizzes and exams). Therefore, the workload in all courses will be approximately 12h/week. Please note that the actual workload will depend on your personal knowledge.

Mandatory Weekly Online Meetings

Weekly Meetings: Tuesdays (starting March 7), 11 am ET/5 pm CET - 12 pm ET/6 pm CET

Meetings will be held online through Zoom. Follow the link to the meeting sessions on the course website on <u>mannheim.instructure.com</u>. If video participation via Internet is not possible, arrangements can be made for students to dial in and join the meetings via telephone.

In preparation for the weekly online meetings, students are expected to watch the lecture videos and read the assigned literature before the start of the meeting. In addition, students are encouraged to post questions about the materials covered in the videos and readings of the week in the forum before the meetings (deadline for posting questions is Tuesday, 7:00 AM E(D)T/01:00 PM CE(S)T).

Students have the opportunity to use the BigBlueButton feature in Canvas to connect with peers outside the scheduled weekly online meetings (e.g., for study groups). Students are not required to use BigBlueButton and can of course use other online meeting platforms such as Google Hangouts, Skype or Microsoft Teams.

Daylight savings time starts in Europe on March 26, 2023 and clocks are turned ahead 1 hour. Daylight saving time starts in the USA on March 12, 2023. Therefore, look carefully at the times of meetings and deadlines! If in doubt, please consider the CET Time (e.g. in Frankfurt) is the OFFICIAL time for all meetings and deadlines.

Grading

Grading will be based on:

- 2 quizzes (worth 15% total)
- Participation in the weekly online meetings, engagement in discussions during the meetings and/or submission of questions to the weekly discussion forums (10% of grade)

- Three homework assignments (45%)
- A final online exam (30% of grade)

100 - 97 A+ 96 - 93 А 92 - 90 A-89 - 87

B+

86 - 83 В 82 - 80

B-

Etc.

The grading scale is a base scale recommended by the MDM. Variations for grading on a scale are at the discretion of the instructor.

The final grade will be communicated under the assignment "Final Grade" in the Canvas course. Please note that the letter grade written in parentheses in Canvas is the correct final grade. The point-grade displayed alongside the letter grade is irrelevant and can be ignored. Dates of when assignment will be due are indicated in the syllabus. There will be a grace period for late assignments (not for guizzes), but late assignments will be penalized according to the following rules:

1 day late: 10% off 25% off 2 days late: 3 days late: 50% off 4+ days late: no credit

Technical Equipment Needs

The learning experience in this course will mainly rely on the online interaction between the students and the instructors during the weekly online meetings. Therefore, we encourage all students in this course to use a web camera and a headset. Decent quality headsets and web cams are available for less than \$20 each. We ask students to refrain from using built-in web cams and speakers on their desktops or laptops. We know from our experience in previous online courses that this will reduce the quality of video and audio transmission and therefore will decrease the overall learning experience for all students in the course. In addition, we suggest that students use a wire connection (LAN), if available, when connecting to the online meetings. Wireless connections (WLAN) are usually less stable and might be dropped.

Mannheim Business School would also like to officially inform you that, in order to facilitate your participation in this course, your personal data will be processed by and on systems run by MBS and our subcontractors. You can find detailed information in our privacy policy and information for data subjects here.

Long Course Description

Statistical agencies and other data collecting institutions constantly face the dilemma between providing broad access to their data and maintaining the confidentiality of the individuals included in the collected data. To address this trade-off various statistical disclosure control (SDC) methods have been developed which help to ensure that no sensitive information can be disclosed based on the disseminated data. However, applying these methods usually comes at the price of information loss or potentially biased inferences based on the protected data.

This course will introduce the data protection strategies that are commonly used by statistical agencies and discuss their advantages and limitations. We will also briefly look at the computer science

perspective on data privacy. We will discuss the differences to the SDC perspective and what the SDC community could learn from the approaches developed in computer science.

The main part of the course will focus on a relatively new approach to statistical disclosure control that has been implemented successfully for some data products recently: Generating synthetic data. With this approach statistical models are fitted to the original data and draws from these models are released instead of the original data. If the synthesis models are selected carefully, most of the relationships found in the original data are preserved.

You will learn about the general idea of synthetic data and the two main approaches for generating synthetic datasets. The close relationship to multiple imputation for nonresponse will also be discussed. The quality of the synthetic data crucially depends on the quality of the models used for generating the data. Thus, the course will present various parametric and nonparametric modeling strategies in great detail.

The quality needs to be evaluated in two dimensions: (i) How well is the analytical validity preserved, i.e. how close are analysis results based on the synthetic data to results obtained from the original data? (ii) What is the remaining risk of disclosure for the released data?

Several strategies to measure these two dimensions will be introduced. All steps of the synthesis process from generating the data, over analyzing the data, to evaluating the analytical validity and disclosure risk will be illustrated using simulated and real data examples in R.

Readings

Mandatory Readings

A list of required and recommended readings for each class is provided below for each specific unit.

Interested students might find the following additional recommended book helpful in preparing for the course:

Drechsler, J. (2011). Synthetic datasets for statistical disclosure control. Theory and implementation. Lecture notes in statistics, 201, New York: Springer

Academic Conduct

Clear definitions of the forms of academic misconduct, including cheating and plagiarism, as well as information about disciplinary sanctions for academic misconduct may be found at

<u>https://www.president.umd.edu/sites/president.umd.edu/files/documents/policies/III-100A.pdf</u> (University of Maryland) and

https://www.uni-mannheim.de/en/research/good-research-practice/ (University of Mannheim).

Knowledge of these rules is the responsibility of the student and ignorance of them does not excuse misconduct. The student is expected to be familiar with these guidelines before submitting any written work or taking any exams in this course. Lack of familiarity with these rules in no way constitutes an excuse for acts of misconduct. Charges of plagiarism and other forms of academic misconduct will be dealt with very seriously and may result in oral or written reprimands, a lower or failing grade on the assignment, a lower or failing grade for the course, suspension, and/or, in some cases, expulsion from the university.

Accommodations for Students with Disabilities

In order to receive services, students at the University of Maryland must contact the Accessibility & Disability Service (ADS) office to register in person for services. Please call the office to set up an appointment to register with an ADS counselor. Contact the ADS office at 301.314.7682; <u>https://www.counseling.umd.edu/ads/</u>.

Students at the Mannheim Business School should contact the Commissioner and Counsellor for Disabled Students and Students with Chronic Illnesses at http://www.uni-mannheim.de/studienbueros/english/counselling/disabled_persons and persons with chronic illnesse http://www.uni-mannheim.de/studienbueros/english/counselling/disabled_persons and persons with chronic illnesse http://www.uni-mannheim.de/studienbueros/english/counselling/disabled_persons and persons with chronic illnesse

Course Evaluation

In an effort to improve the learning experience for students in our online courses, students will be invited to participate in an online course evaluation at the end of the course. Participation is entirely voluntary and highly appreciated.

Sessions

Week 1:

Video lecture: available Tuesday, February 28, 2023

Online meeting: Tuesday, March 7, 2023, 11:00 AM EST/05:00 PM CET

Required Readings:

Reiter, J. P. (2012). Statistical approaches to protecting confidentiality for microdata and their effects on the quality of statistical inferences. Public Opinion Quarterly 76, 163–181.

Recommended Readings:

Winkler, W. E. (2007). Examples of easy-to-implement, widely used methods of masking for which analytic properties are not justified. Technical report, Statistical Research Division, U.S. Bureau of the Census, Washington, DC.

Week 2:

Video lecture: available Tuesday, March 7, 2023

Online meeting: Tuesday, March 14, 2023, 12:00 PM EDT/05:00 PM CET

Assignment 1: due Friday, March 17, 2023, 6:59 PM EST/11:59 PM CET

Required Readings:

Kinney, S. K., Reiter, J. P., Reznek, A. P., Miranda, J., Jarmin, R. S., and Abowd, J. M. (2011). Towards unrestricted public use business microdata: The synthetic Longitudinal Business Database. International Statistical Review 79, 363–384.

Rubin, D. B. (1993). Discussion: Statistical disclosure limitation. Journal of Official Statistics 9, 462-468

Recommended Readings:

Little, R. J. A. (1993). Statistical analysis of masked data. Journal of Official Statistics 9, 407-426.

Week 3:

Video lecture: available Tuesday, March 14, 2023

Online meeting: Tuesday, March 21, 2023, 12:00 PM EDT/05:00 PM CET

Quiz 1: due Friday, March 24, 2023, 6:59 PM EDT/11:59 PM CET

Required Readings:

- Raghunathan, T. E., Reiter, J. P., and Rubin, D. B. (2003). Multiple imputation for statistical disclosure limitation. *Journal of Official Statistics* **19**, 1–16.
- Reiter, J. P. (2003). Inference for partially synthetic, public use microdata sets. *Survey Methodology* **29**, 181–189.

Recommended Readings:

Rässler, S., Rubin, D. B., Zell, E. R (2007). Incomplete data in epidemiology and medical statistics. In: C. R. Rao, J. Miller, D.C. Rao eds., *Handbook of Statistics*, **27**, Elsevier, 569–601.

Week 4:

Video lecture: available Tuesday, March 21, 2023

Online meeting: Tuesday, March 28, 2023, 11:00 AM EDT/05:00 PM CEST

Assignment 2: due Friday, March 31, 2023, 5:59 PM EDT/11:59 PM CEST

Required Readings:

Raghunathan, T.E., Lepkowski, J.M., van Hoewyk, J., and Solenberger, P. (2001). A multivariate technique for multiply imputing missing values using a series of regression models. *Survey Methodology* 27, 85–96.

Recommended Readings:

Rubin, D. B. (1981). The Bayesian bootstrap, *The Annals of Statistics* 9, 130–134.

*** No online meeting on Tuesday, April 4, 2023 ***

Week 5:

Video lecture: available Tuesday, March 28, 2023

Online meeting: Tuesday, April 11, 2023, 11:00 AM EDT/05:00 PM CEST

Quiz 2: due Friday, April 14, 2023, 5:59 PM EDT/11:59 PM CEST

Required Readings:

Reiter, J. P. (2005). Using CART to generate partially synthetic, public use microdata. *Journal of Official Statistics* **21**, 441–462.

Schenker, N., Raghunathan, T. E., Chiu, P. L., Makuc, D. M., Zhang, G., and Cohen, A. J. (2006). Multiple imputation of missing income data in the National Health Interview Survey. *Journal of the American Statistical Association* **101**, 924–933.

Recommended Readings:

Meng, X.-L. (1994). Multiple-imputation inferences with uncongenial sources of input (disc: P558-573). Statistical Science **9**, 538–558.

Week 6:

Video lecture: available Tuesday, April 11, 2023

Online meeting: Tuesday, April 18, 2023, 11:00 AM EDT/05:00 PM CEST

Assignment 3: due Friday, April 28, 2023, 5:59 PM EDT/11:59 PM CEST

Required Readings:

- Karr, A. F., Kohnen, C. N., Oganian, A., Reiter, J. P., and Sanil, A. P. (2006). A framework for evaluating the utility of data altered to protect confidentiality. *The American Statistician* **60**, 224–232.
- Abayomi, K., Gelman, A., and Levy, M. (2008). Diagnostics for multivariate imputations. *Journal of the Royal Statistical Society, Series C* **57**, 273–291

Recommended Readings:

Woo, M. J., Reiter, J. P., Oganian, A., and Karr, A. F. (2009). Global measures of data utility for microdata masked for disclosure limitation. *Journal of Privacy and Confidentiality* **1**, 111–124.

Week 7:

Video lecture: available Tuesday, April 18, 2023

Online meeting: Tuesday, April 25, 2023, 11:00 AM EDT/05:00 PM CEST

Required Readings:

- Drechsler, J. and Reiter, J. P. (2008). Accounting for intruder uncertainty due to sampling when estimating identification disclosure risks in partially synthetic data. In J. Domingo-Ferrer and Y. Saygin, eds., Privacy in Statistical Databases, 227–238. New York: Springer.
- Reiter, J. P. and Mitra, R. (2009). Estimating risks of identification disclosure in partially synthetic data. *Journal of Privacy and Confidentiality*, 1(1), Article 6.

Recommended Readings:

Reiter, J. P., Wang, Q., and Zhang, B. (2014), Bayesian estimation of disclosure risks in multiply imputed, synthetic data, *Journal of Privacy and Confidentiality* **6(1)**, Article 2.

Week 8:

Video lecture: available no video lecture

Online meeting: Tuesday, May 2, 2023, 11:00 AM EDT/05:00 PM CEST

Required Readings:

- Raab, G. M., Nowok, B., & Dibben, C. (2016). Practical data synthesis for large samples. Journal of Privacy and Confidentiality, **7(3)**, 67-97.
- Drechsler, J. (2018). Some Clarifications Regarding Fully Synthetic Data. In: J. Domingo-Ferrer & F. Montes (Eds.), *Privacy in Statistical Databases* (Lecture Notes in Computer Science 11126), Berlin: Springer, 109–121.

Final exam

Online exam

Due: Tuesday, May 9, 2023, 5:59 PM EDT/11:59 PM CEST
