# Syllabus

**Review of Statistical Concepts**  
3 credits/6 ECTS

Dr. Anna-Carolina Haensch

Video lecture by  
Brian Kim, Phd

June 7 – August 23, 2023

## Short Course Description

This course provides a brief overview of the basics of probability and statistics. Students will review basic probability concepts and probability distributions, the Central Limit Theorem and hypothesis testing, and linear and logistic regression. Throughout this course, students should develop and reinforce proper statistical intuition. This includes knowing how to identify a sample and a population and applying appropriate statistical methods such as hypothesis testing, as well being able to identify different types of data and using the proper methods for each type of data. By the end of the course, students should have a strong foundation in statistics with which they can start their graduate coursework.

## Course Objectives

By the end of the course, students will…

- Understand sample and population and know how to apply statistical methods appropriately
- Be able to apply basic probability
- Know basic probability distributions and how to apply them
- Perform hypothesis tests and construct confidence intervals
- Regression analysis, including multiple regression and logistic regression.

## Prerequisites

No prerequisites.

## Class Structure and Course Concept

This is an online course using a flipped classroom design. It covers the same material and content as an on-site course but runs differently. In this course, you are responsible for watching video-recorded lectures and reading the required literature for each unit prior to participating in mandatory weekly one-hour online meetings where students have the chance to discuss the materials from a unit with the instructor. Although this is an online course where students have more freedom in when they engage with the course materials, students are expected to spend the same amount of time overall on all activities in the course – including preparatory activities (readings, studying), in-class-activities (watching prerecorded videos, attending the live online meetings), and follow-up activities (working on assignments and exams) – as in
an on-site course. As a rule of thumb you can expect to spend approximately 3h/week on in-class-activities and 9 hours per week on out-of-class activities (preparing for class, readings, assignments, projects, studying for quizzes and exams). Therefore, the workload in all courses will be approximately 12h/week. Please note that the actual workload will depend on your personal knowledge.

Mandatory Weekly Online Meetings

Wednesdays, 11am EDT/5 pm CEST, June 7 - August 23, 2023

Meetings will be held online through Zoom. Follow the link to the meeting sessions on the course website on umd.instructure.com. If video participation via Internet is not possible, arrangements can be made for students to dial in and join the meetings via telephone.

In preparation for the weekly online meetings, students are expected to watch the lecture videos and read the assigned literature before the start of the meeting. In addition, students are encouraged to post questions about the materials covered in the videos and readings of the week in the forum before the meetings (deadline for posting questions is Tuesdays 11am EDT/5 pm CEST).

Students have the opportunity to use the BigBlueButton feature in Canvas to connect with peers outside the scheduled weekly online meetings (e.g., for study groups). Students are not required to use BigBlueButton and can of course use other online meeting platforms such as Google Hangouts, Skype or Microsoft Teams.

Grading

Grading will be based on:

- 11 homework assignments (60% of grade total, lowest homework dropped)
- Participation in online meetings and submission of questions demonstrating understanding of readings (10% of grade)
- Online Final Exam (30% of grade)

<table>
<thead>
<tr>
<th>Grade</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>100 - 97</td>
</tr>
<tr>
<td>A</td>
<td>96 - 93</td>
</tr>
<tr>
<td>A-</td>
<td>92 - 90</td>
</tr>
<tr>
<td>B+</td>
<td>89 - 87</td>
</tr>
<tr>
<td>B</td>
<td>86 - 83</td>
</tr>
<tr>
<td>B-</td>
<td>82 - 80</td>
</tr>
<tr>
<td>Etc.</td>
<td></td>
</tr>
</tbody>
</table>

The grading scale is a base scale. Variations for grading on a scale are at the discretion of the instructor.

The final grade will be communicated under the assignment "Final Grade" in the Canvas course. Please note that the letter grade written in parentheses in Canvas is the correct final grade. The point-grade displayed alongside the letter grade is irrelevant and can be ignored. Dates of when assignment will be due are indicated in the syllabus. Extensions will be granted sparingly and are at the instructor's discretion.
Technical Equipment Needs

The learning experience in this course will mainly rely on the online interaction between the students and the instructors during the weekly online meetings. Therefore, we encourage all students in this course to use a web camera and a headset. Decent quality headsets and web cams are available for less than $20 each. We ask students to refrain from using built-in web cams and speakers on their desktops or laptops. We know from our experience in previous online courses that this will reduce the quality of video and audio transmission and therefore will decrease the overall learning experience for all students in the course. In addition, we suggest that students use a wire connection (LAN), if available, when connecting to the online meetings. Wireless connections (WLAN) are usually less stable and might be dropped.

Mannheim Business School would also like to officially inform you that, in order to facilitate your participation in this course, your personal data will be processed by and on systems run by MBS and our subcontractors. You can find detailed information in our privacy policy and information for data subjects here.

Long Course Description

By the end of this course, students should be up to speed on statistical reasoning, hypothesis testing, and regression analysis. First, the course covers basic statistical thinking, reviewing the difference between a sample and a population as well as methods in sampling and experiments. Students will also be expected to recognize numerical and categorical data and apply proper methods throughout the course based on the type of data. This includes using the proper summaries and visualizations of the data, but also applies later on in hypothesis testing and confidence intervals.

We will cover the basics of the Central Limit Theorem, applying it in the form of confidence intervals and hypothesis tests. Students should know what conditions must be met in order to perform certain hypothesis tests, as well as be able to interpret the confidence intervals and hypothesis tests appropriately.

This course will cover various types of tests, including one- and two-sample paired and unpaired t-tests, chi-squared tests, ANOVA. This course also covers simple linear regression, multiple regression, and logistic regression. Students should know how a least-squares regression line is fit, as well as understand the assumptions that go along with it. In addition, students should be comfortable with evaluating the linear regression models and using diagnostics to determine whether it is appropriate to use a linear regression. For logistic regression, students should also know how to properly interpret the coefficients.

Readings

Primary Readings
Diez, D. M., Barr, C. D., & Çetinkaya-Rundel, M. (2012). OpenIntro Statistics. You can download the PDF of this textbook at openintro.org

Complementary Readings
List of required and recommended readings for each class are provided below for each specific unit.

Academic Conduct

Clear definitions of the forms of academic misconduct, including cheating and plagiarism, as well as information about disciplinary sanctions for academic misconduct may be found at
Knowledge of these rules is the responsibility of the student and ignorance of them does not excuse misconduct. The student is expected to be familiar with these guidelines before submitting any written work or taking any exams in this course. Lack of familiarity with these rules in no way constitutes an excuse for acts of misconduct. Charges of plagiarism and other forms of academic misconduct will be dealt with very seriously and may result in oral or written reprimands, a lower or failing grade on the assignment, a lower or failing grade for the course, suspension, and/or, in some cases, expulsion from the university.

**Accommodations for Students with Disabilities**

In order to receive services, students at the University of Maryland must contact the Accessibility & Disability Service (ADS) office to register in person for services. Please call the office to set up an appointment to register with an ADS counselor. Contact the ADS office at 301.314.7682; [https://www.counseling.umd.edu/ads/](https://www.counseling.umd.edu/ads/).

Students at the Mannheim Business School should contact the Commissioner and Counsellor for Disabled Students and Students with Chronic Illnesses at [http://www.uni-mannheim.de/studienbueros/english/counselling/disabled_persons_and_persons_with_chronic_illnesses/](http://www.uni-mannheim.de/studienbueros/english/counselling/disabled_persons_and_persons_with_chronic_illnesses/).

**Course Evaluation**

In an effort to improve the learning experience for students in our online courses, students will be invited to participate in an online course evaluation at the end of the course. Participation is entirely voluntary and highly appreciated.
Sessions

**Week 1: Introduction**

Video lecture: available Wednesday, May 31, 2023  
Online meeting: Wednesday, June 7, 2023, 11am EDT/5 pm CEST  
Assignment 1: due Friday, June 9, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2015) Ch 1.1-1.5

**Week 2: Descriptive Statistics**

Video lecture: available Wednesday, June 7, 2023  
Online meeting: Wednesday, June 14, 2023, 11am EDT/5 pm CEST  
Assignment 2: due Friday, June 16, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2015) Ch 1.6-1.8

**Week 3: Probability**

Video lecture: available Wednesday, June 14, 2023  
Online meeting: Wednesday, June 21, 2023, 11am EDT/5 pm CEST  
Assignment 3: due Friday, June 23, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 3

**Week 4: The Normal Distribution and Z-Scores**

Video lecture: available Wednesday, June 21, 2023  
Online meeting: Wednesday, June 28, 2023, 11am EDT/5 pm CEST  
Assignment 4: due Friday, June 30, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 4.1

**Week 5: Other Probability Distributions**

Video lecture: available Wednesday, June 28, 2023  
Online meeting: Wednesday, July 5, 2023, 11am EDT/5 pm CEST  
Assignment 5: due Friday, July 7, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 4.2-4.5
**Week 6: Confidence Intervals**

Video lecture: available Wednesday, July 05, 2023  
Online meeting: Wednesday, July 12, 2023, 11am EDT/5 pm CEST  
Assignment 6: due Friday, July 14, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 5.1

**Week 7: Central Limit Theorem and Hypothesis Testing**

Video lecture: available Wednesday, July 12, 2023  
Online meeting: Wednesday, July 19, 2023, 11am EDT/5 pm CEST  
Assignment 7: due Friday, July 21, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 5.2-5.3

**Week 8: Inference for Numerical Data**

Video lecture: available Wednesday, July 19, 2023  
Online meeting: Wednesday, July 26, 2023, 11am EDT/5 pm CEST  
Assignment 8: due Friday, July 28, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 6

**Week 9: Inference for Categorical Data**

Video lecture: available Wednesday, July 26, 2023  
Online meeting: Wednesday, August 2, 2023, 11am EDT/5 pm CEST  
Assignment 9: due Friday, August 4, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 7

**Week 10: Linear Regression**

Video lecture: available Wednesday, August 2, 2023  
Online meeting: Wednesday, August 9, 2023, 11am EDT/5 pm CEST  
Assignment 10: due Friday, August 11, 2023, 11am EDT/5 pm CEST

**Required Readings:**  
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 8

**Week 11: Regression Assumptions, Multiple- and Logistic Regression**

Video lecture: available Wednesday, August 9, 2023  
Online meeting: Wednesday, August 16, 2023, 11am EDT/5 pm CEST  
Assignment 11: due Friday, August 18, 2023, 11am EDT/5 pm CEST
Required Readings:
Diez, Barr, and Çetinkaya-Rundel (2019) Ch 9

Final exam

Due: Wednesday, August 23, 2023, 11am EDT/5 pm CEST
